

# Entry Height Comparison

Apex WalkIn MRI vs. conventional mobile MRI trailer

## Why the 50-inch difference matters

A conventional mobile MRI trailer floor sits roughly 60 inches off the ground, so every patient arrives through a wheelchair Lift or a staircase.

The Apex WalkIn MRI entrance sits about 10 inches from the ground. Built on the low-floor bus principle with wide double sliding doors, it lets wheelchairs, walkers, stretchers and mobility-impaired patients enter directly — no Lift cycle, no transfer, no staircase.
